**Safety Measures**

• If product has an exposed circuit board, do not touch the product under power.
• If Class 1 Laser Product: Laser radiation is present if the system is open.
• Wiring terminations should not be made with the product and/or electric lines under power.
• Product installation and/or mounting should be completed by a certified professional as per the local safety and building code guidelines.
• Cables (including power and charging cables) should be placed and routed to avoid creating electric, tripping or safety hazards.

**USB Power Delivery 3.0**

**Note:** Your Host Computer must support Power Delivery in order to utilize Power Delivery passthrough.

**Fast Role Swap**

A Fast Role Swap function is available when using Power Delivery 3.0. This function prevents USB data disruption when switching power sources (bus power to USB-C power adapter or USB-C Power Adapter to bus power). For this function to work, the Host Computer must also support Power Delivery 3.0.

If the Host Computer’s USB-C Port only supports USB Power Delivery 2.0, it will still support Power Delivery passthrough, but it will not support Fast Role Swap.

**Warning for Host Devices Using Power Delivery 2.0:** Before disconnecting a USB-C Power Adapter from the Multiport Adapter, ensure all data transfers are complete.
