Hotkey Commands

Hotkey commands are keystroke sequences that initiate computer/device functions. Hotkeys commands can be used to initiate KVM Switch functions. A hotkey command sequence must be initiated by the HK_LCode, followed by 1-2 additional keystrokes. Successful hotkey command inputs result in a high-pitch beep. Unsuccessful hotkey command inputs result in a low-pitched beep.

> *Notes:*
> *- All keystroke combinations must be entered in rapid succession.*
> *- Press and release the indicated keys, unless otherwise specified.*
