Packaging Contents
- 1x Set Universal Rack Rails
- 8/16/14 x M5 Panel Screws (1U/2U/3U)
- 8/16/14 x M5 Cage Nuts (1U/2U/3U)
- 1x M5 Wrench

System Requirements
- Standard 19in wide rack
- 1U/ 2U/ 3U of rack space

Tools Required
- Phillips screwdriver

Installation
1. Determine the mounting depth of the rack/cabinet.
2. Gather the components of the two side rails. Each side rail is comprised of 3 pieces: two End Rails with the rack mounting brackets and the flat middle section with the adjustable slide cut outs.

NOTE: Look carefully at the End Rails, as there are two different sets. The lip along the top edge will be taller on one set, than the other. The side rails use one of each.

End Rail #1

3. Lay out the two End Rails end-to-end (rack mounting bracket at opposite ends), and then place the Sliding Rail over top of the smaller of the End Rail (see “Inside View” photo for reference). Place the other End Rail overtop the Sliding Rail, so it is now sandwiched between the two End Rails.
4. Adjust the length of the rails, such that the rack mounting brackets are slightly longer than the mounting depth of the rack.
5. Fasten the middle Sliding Rail to each End Rail with 4 screws and nuts each (2 on the top slide and 2 on bottom) with a screwdriver and the provided wrench. The screw should go in from the inside of the rail, with the nut on the outside (underneath the lip).

Inside View

*installation photos are for reference only
NOTE: If possible, do not have the screws go through all 3 Rails, as this will prevent the rails from sliding. If possible, try to only have the screws go through the Sliding Rail and one End Rail.

6. Once one rail is complete, assemble the second rail. The length of both rails should be identical.
7. Once both rails are complete, line them up side-by-side, with the rack mounting brackets facing outwards. Place the cross braces between the two rails. Ideally, the braces should be equally spaced along the length of the rails, but can be arranged in any configuration depending on the equipment the rails will be holding in the rack.

8. Fasten the ends of the cross braces to the side rails with the flat head screws. The braces should go underneath the flat base of the side rails, with the screw going in from the top.

9. Once the cross braces are firmly attached, the completed unit can be mounted into the cabinet/rack. The cable manager is mounted at the same time and is simply placed over the rack mounting brackets then both are fastened to the rack posts.

NOTE: Make sure to firmly tighten the screws/nuts in the side rails once the unit is mounted into the rack, as you may have had to loosen them to installed the rails into the rack.

Warranty Information

This product is backed by a lifetime warranty.

In addition, StarTech.com warrants its products against defects in materials and workmanship for the periods noted, following the initial date of purchase. During this period, the products may be returned for repair, or replacement with equivalent products at our discretion. The warranty covers parts and labor costs only. StarTech.com does not warrant its products from defects or damages arising from misuse, abuse, alteration, or normal wear and tear.

Limitation of Liability

In no event shall the liability of StarTech.com Ltd. and StarTech.com USA LLP (or their officers, directors, employees or agents) for any damages (whether direct or indirect, special, punitive, incidental, consequential, or otherwise), loss of profits, loss of business, or any pecuniary loss, arising out of or related to the use of the product exceed the actual price paid for the product. Some states do not allow the exclusion or limitation of incidental or consequential damages. If such laws apply, the limitations or exclusions contained in this statement may not apply to you.
